When using the signature pad for prescriptions. The system was not connecting to the signature pad after a couple signatures were entered. The system now resets the signature pad after each sale that asks for a signature.	frmPrescriptions.frm
Sales History reports were taking too long to generate. Sales history now uses a working table to generate only the data between the two invoice dates entered.	SalesHstRecap.rpt DSalesHst1.rpt SalesHstRecapELCH.rpt DSalesHst2.rpt DSales3.rpt DSalesHst3.rpt DSalesHst4.rpt DSalesHst5.rpt DSalesHst6.rpt DSalesHst7.rpt DSalesHst8.rpt DSalesHst9.rpt DSalesHst10.rpt SalesHstWeeklyRecap.rpt DSalesHstDept.rpt SalesRevenueRecap.rpt
Added a customer price list to the Inventory History reports. This will print a customer price list for only the items a customer has purchased.	InCustPriceHist.rpt InHistory.LAY INHistory.LST
Order Processing: When an invoice is generated, the inventory gets reduced and an entry in the history file is made. Some detail lines were being marked with a location of zero. Inventory was not getting updated. Now when it cannot find the location on file, it will search for the first location of that item and update the quantities there. Most places use just one location.	frmOrderVerify.frm frmOrderVerify.frx
POS Management (Clear history files): This was taking too long. Sped up the clearing and labeled which files would be cleared.	frmPOSManagerUP.frm frmPOSManagerUP.frx
POS Multisales: Occasionally, sales would be deleted and non recoverable. Splitting checks would cause this. When saving a ticket, the system would save it on the server, save it locally In the database , then save it locally as a flat file. Removed saving it locally In the database. (too slow) Changed the manager option to be able to look at all flat file saves on any terminal. There must be a file POSDrawerLocations.TXT on each computer where each row is the location of the drawers.
